

Health and Safety Monitoring Systems at Home

SunSafe[®] products provide seniors with options for living independently and safely at home when family or caregivers are not available. Slips or falls are very common with the elderly population and if they are alone the outcome can be tragic. Failure to take medications correctly can result in poor health and hospitalization. Personal monitoring and medical alert devices can be perfect complements to in home care services.

SunSafe[®] products include:

- Personal Emergency Response System (PERS)
- Cellular Personal Emergency Response System
- Fall Detection Button
- Medication Dispenser Solutions
- Smoke Detectors
- All Products Include Around the Clock Monitoring
- All Products Include Free Installation for New Home Care Customers (\$35 Value)

Personal Emergency Response System (PERS)

Our medical alert systems are easy-to-use and feature the smallest medical alarm help button in the industry. When you need help, simply push your button and one of our friendly Care Center Representatives will answer your call and get you the help that you need.

Is there a stranger at your door? Do you need to step outside to get the mail in inclement weather? Our Care Call feature is available to help keep you safe. Simply press your button and one of our Care Center Representatives will listen as you answer the door or call to make sure you got in OK from your trip to the mail box.

Our Care Center Representatives are there for you 24 hours a day, 7 days a week, 365 days a year.

Cellular Personal Emergency Response System

SunSafe[®] also has a Cellular Personal Emergency Response Service. In the past, PERS needed an active phone line in the home in order to work. With Cellular PERS, no land lines or phone bills are required. Our 3G system is proven and dependable. Just plug in the base unit and press your Personal Help Button.

Our Care Center Representatives are there for you 24 hours a day, 7 days a week, 365 days a year.

MobileCare Personal Emergency Response System

MobileCare brings safety to everyday living. Designed to break through the confines of traditional home-bound monitoring, MobileCare is a complete service that includes a discrete, wearable device to provide highly sophisticated fall detection capabilities for Personal Emergency Response Services (PERS), GPS-tracking & locating, and two-way automated hands-free communication from virtually

anywhere via cellular networks. The device connects directly to the Care Center for instant assistance whenever and wherever needed

Fall Detector Button

For those circumstances when a loved one is unable to push their Personal Help Button. When a fall is detected and no sudden movement is made after the fall, an alarm will be sent to the Care Center to get you help. A representative will then activate the unit and talk to you to ensure that you are safe. In the event of an emergency, the Care Center will contact a caregiver, next door neighbor or emergency responder when appropriate to get you the help you need.

Monitored Medication Dispenser

Research indicates that about 55% of older adults do not follow medication regimens properly, 40% of nursing homes admissions are directly related to the inability to properly self-medicate and 30% of older adult hospital admissions are a result of medication non-adherence.

SunSafe® Medication Dispensers make it easy to remember to take your medications at the right time to ensure that you always get the right dose. When it is time to take a medication, the tray will automatically turn to the next dose, and an alarm will sound. The dose to be taken is located under the small door on the cover. The medicine is removed by sliding the door back. When the medicine is not taken within 30 minutes of the prescribed time, our Care Center will be notified. The representative will call the patient to remind them to take their medicine or contact a family member

This service can be provided either monitored or non-Monitored.

Smoke and Carbon Monoxide Detectors

Our monitored smoke detectors provide an extra level of safety by contacting the Care Center when an alarm happens. When your smoke detector alarm is set off the Care Center can call to see if you are OK and ask if there is smoke or fire in your home. If there is they will tell you to exit your home and they will immediately call the fire department as well as your responders to make sure that you get the help that you need. The Care Center also receives an alert when your batteries are low in your smoke detector and can call to remind you to change your battery.
